Powder Technology 81 (1994) 303–305

POWDER TECHNOLOGY

Subject Index of Volume 81

Aerosol production
characteristic features of the vaporization mechanism in the crucible-free production of aerosol particles, 93
Aggregates
aggregates of particles in dilute suspensions: estimation of aggregate volume index and diameter, 169
Agitation-fluidized bed
application of fuzzy logic to bed height control in agitation-fluidized bed granulation, 161
Alumina
accurate submicron particle size measurement of alumina and quartz powders using a cuvette photocentrifuge, 235

Bed height
application of fuzzy logic to bed height control in agitation-fluidized bed granulation, 161
Beneficiation
technology for the beneficiation of graphite-bearing dusts from integrated iron-and-steel works, 11
Breakage
computer simulation of impact-induced particle breakage, 207
Brittleness
assessment of the crumbliness of individual fragile particulates from that of their assemblies, 83
Bubble behaviour
analysis of a bubbling 2-D gas-fluidized bed using image processing, 149
Bubble characteristics
measurement and application of the rheological parameters of aerated fine powders — a novel characterization approach to powder flow properties, 177

Ceramic powders
investigation of compaction equations for powders, 75
Ceramics
preparation of composite ceramic membrane from titania powders, 249
Cereal flakes
a study of the effects of water content on the compaction behaviour of breakfast cereal flakes, 189
Cereals
assessment of the crumbliness of individual fragile particulates from that of their assemblies, 83
Circulating beds
axial voidage profiles in fast fluidized beds, 259
Circulating fluidized beds
dispersion of lateral and axial solids in a cocurrent downflow circulating fluidized bed, 19
Comminution
linear stochastic models for mineral liberation, 217
Compaction
size enlargement of fine powders by means of air pressure, 3
Compaction behaviour
a study of the effects of water content on the compaction behaviour of breakfast cereal flakes, 189
Compaction equations
investigation of compaction equations for powders, 75
Compression
assessment of the crumbliness of individual fragile particulates from that of their assemblies, 83
Continuum mechanics
numerical simulation of free shrinkage using a continuum theory for sintering, 287

Densification
numerical simulation of free shrinkage using a continuum theory for sintering, 287
Diffusion
pore characterization in cellulose beads from diffusion studies using the spin echo NMR technique, 279
Dispersions
dispersion of lateral and axial solids in a cocurrent downflow circulating fluidized bed, 19
preparation of composite ceramic membrane from titania powders, 249
Dust
technology for the beneficiation of graphite-bearing dusts from integrated iron-and-steel works, 11

Elasticity
dynamic measurements for the stiffness constant of a powder bed, 139

Flotation
technology for the beneficiation of graphite-bearing dusts from integrated iron-and-steel works, 11
Flow
flow of granular materials in a vertical channel under the action of gravity, 65
Flow properties
flow property measurement using the Jenike cell for wheat flour at various moisture contents and consolidation times, 293
Fluidized beds
prediction of the minimum fluidization velocity, 197
an experimental study on the porosity of powder coatings in a fluidized bed, 201
Fourier transformation
shift x, y-coordinate detection of line figures and the extraction of particle shape information, 111
Fragmentation
computer simulation of impact-induced particle breakage, 207
Free shrinkage
numerical simulation of free shrinkage using a continuum theory for sintering, 287

Elsevier Science S.A.

Fuzzy control
application of fuzzy logic to bed height control in agitation-fluidized bed granulation, 161

Gas chromatography
the influence of surface dehydroxylation and rehydroxylation on the components of surface free energy of silica gels, 241
Gas-fluidized bed
analysis of a bubbling 2-D gas-fluidized bed using image processing, 149
Granular materials
flow of granular materials in a vertical channel under the action of gravity, 65
Granulation
size enlargement of fine powders by means of air pressure, 3
Graphite
technology for the beneficiation of graphite-bearing dusts from integrated iron-and-steel works, 11

Heterogeneous systems
pore characterization in cellulose beads from diffusion studies using the spin echo NMR technique, 279
Hopper exit
powder strength after changes in principal stress direction, 25
Hoppers
flow of granular materials in a vertical channel under the action of gravity, 65
Hydrodynamics
prediction of the minimum fluidization velocity, 197
axial voidage profiles in fast fluidized beds, 259

Image analysis
size enlargement of fine powders by means of air pressure, 3
Image processing
tracking the translational and rotational motion of granular particles: use of high-speed photography and image processing, 35
analysis of a bubbling 2-D gas-fluidized bed using image processing, 149
Impact
computer simulation of impact-induced particle breakage, 207

Jaggedness
assessment of the crumbliness of individual fragile particulates from that of their assemblies, 83
Jenike cell
flow property measurement using the Jenike cell for wheat flour at various moisture contents and consolidation times, 293

Laser measurements
measurement of particle cloud density and velocity using laser devices, 269
Low-velocity pneumatic conveying
pressure drop prediction in low-velocity pneumatic conveying, 125

Membranes
preparation of composite ceramic membrane from titania powders, 249
Mercury intrusion
pore characterization in cellulose beads from diffusion studies using the spin echo NMR technique, 279
Mill power
the effect of mill power on the selection function for tumbling and vibration ball mills, 101
Mineral liberation
linear stochastic models for mineral liberation, 217
Mixing measurements
dispersion of lateral and axial solids in a cocurrent downflow circulating fluidized bed, 19
Model granular system
tracking the translational and rotational motion of granular particles: use of high-speed photography and image processing, 35
Models
axial voidage profiles in fast fluidized beds, 259
Motion tracking
tracking the translational and rotational motion of granular particles: use of high-speed photography and image processing, 35

Noisy data
assessment of the crumbliness of individual fragile particulates from that of their assemblies, 83
Numerical simulation
numerical simulation of free shrinkage using a continuum theory for sintering, 287

Packing
effects of segregation on the packing of spherical and non-spherical particles, 51
Particle cloud properties
measurement of particle cloud density and velocity using laser devices, 269
Particle shape analysis
shift x, y-coordinate detection of line figures and the extraction of particle shape information, 111
Particle size measurement
accurate submicron particle size measurement of alumina and quartz powders using a cuvette photocentrifuge, 235
Photocentrifuge
accurate submicron particle size measurement of alumina and quartz powders using a cuvette photocentrifuge, 235
Photography
tracking the translational and rotational motion of granular particles: use of high-speed photography and image processing, 35
Pipeline flow
plug flow movement of solids, 59
Plug flow
plug flow movement of solids, 59
Pore size
pore characterization in cellulose beads from diffusion studies using the spin echo NMR technique, 279
Porosity
an experimental study on the porosity of powder coatings in a fluidized bed, 201
Porous cellulose beads
pore characterization in cellulose beads from diffusion studies using the spin echo NMR technique, 279
Powder beds
size enlargement of fine powders by means of air pressure, 3
Powder coatings
an experimental study on the porosity of powder coatings in a fluidized bed, 201
Powder flow
measurement and application of the rheological parameters of aerated fine powders — a novel characterization approach to powder flow properties, 177
Powder strength
powder strength after changes in principal stress direction, 25

Pressure drop
pressure drop prediction in low-velocity pneumatic conveying, 125
Pressure gradient
particle–wall stresses in vertical slurry flows, 117

Quartz
accurate submicron particle size measurement of alumina and quartz powders using a cuvette photocentrifuge, 235

Rheological parameters
measurement and application of the rheological parameters of aerated fine powders — a novel characterization approach to powder flow properties, 177

Segregation
effects of segregation on the packing of spherical and non-spherical particles, 51
Shear strength
powder strength after changes in principal stress direction, 25
Silica gel
the influence of surface dehydroxylation and rehydroxylation on the components of surface free energy of silica gels, 241
Sintering
numerical simulation of free shrinkage using a continuum theory for sintering, 287
Slurry flow
particle–wall stresses in vertical slurry flows, 117
Solids movement
plug flow movement of solids, 59
Spheres
prediction of the minimum fluidization velocity, 197
Spherical well-compacted granule
application of fuzzy logic to bed height control in agitation-fluidized bed granulation, 161
Spin echo NMR
pore characterization in cellulose beads from diffusion studies using the spin echo NMR technique, 279
Stochastic model
linear stochastic models for mineral liberation, 217
Stress direction
powder strength after changes in principal stress direction, 25
Stress–strain relationships
assessment of the crumbliness of individual fragile particulates from that of their assemblies, 83
Surface free energy
the influence of surface dehydroxylation and rehydroxylation on the components of surface free energy of silica gels, 241
Surface heterogeneity
the influence of surface dehydroxylation and rehydroxylation on the components of surface free energy of silica gels, 241
Suspensions
aggregates of particles in dilute suspensions: estimation of aggregate volume index and diameter, 169

Titania
preparation of composite ceramic membrane from titania powders, 249
Tumbling ball mills
the effect of mill power on the selection function for tumbling and vibration ball mills, 101

Vaporization mechanism
characteristic features of the vaporization mechanism in the crucible-free production of aerosol particles, 93
Vibration
dynamic measurements for the stiffness constant of a powder bed, 139
Vibration ball mills
the effect of mill power on the selection function for tumbling and vibration ball mills, 101
Voidage
axial voidage profiles in fast fluidized beds, 259
Volume index
aggregates of particles in dilute suspensions: estimation of aggregate volume index and diameter, 169

Wall stress
particle–wall stresses in vertical slurry flows, 117
Wheat flour
flow property measurement using the Jenike cell for wheat flour at various moisture contents and consolidation times, 293
